

# Distribution Personal Income: Trends over Time

*Dennis Fixler, Marina Gindelsky, and David Johnson*

*3/6/20*

The views expressed are those of the authors and do not necessarily represent the U.S. Bureau of Economic Analysis, the U.S. Department of Commerce, or the University of Michigan.

- Popular perception
  - GDP is growing, but so is inequality
  - Household income is decreasing, e.g., well-being is falling
  - Households do not share in economic growth: only the top 1% see growing incomes
- What the data shows (2007-2016)
  - Personal Income is growing for all quintiles
  - 58% of growth in Personal Income accrued to top quintile over period
  - Inequality is virtually unchanged - top shares have not risen

## Growth over Time (Real \$2012)

Note: Estimates are deflated using PCE. Money income is recalculated according to the census definition.

# What's Been Done

---

- A lot!
- Previous work by BEA: Fixler et al. (2014, 2017, 2018, 2019)
- Key studies based on tax data:
  - National income: Piketty, Saez, Zucman (PSZ, 2018), Auten and Splinter (2019)
  - Market Income: CBO
- Key studies based on CPS: Census (money income) metrics, Armour et al. (2016), Bollinger et al. (2019), Rothbaum (2015)
- Important differences between methods
  - Base data set
  - Income definition
  - Unit of Measurement
  - Equalization methods

## What We Do

---

- Construct a new distribution of Personal Income from publicly available data
- Calculate inequality metrics for 2007-2016

1. Identify a NIPA total to be distributed: 60 components of PI
2. Identify CPS variable (s) (+ outside data) to allocate component
  - SOI: adjust “tail” (underreported top incomes)
  - CBO: imputations for Medicaid, SNAP, and SSI
  - SCF: imputed interest
  - CE: rental equivalence
  - CMS: medicare

## 3. Sum all component NIPA totals to subtotals of interest and PI

- Adjusted Money Income (AMI)
- Financial (F)
- Health (H)
- Other Transfers (net) (T)
- Household Income = AMI + F + H + T

Personal Income = Household  
Income - *Household Current  
Transfer Receipts from Nonprofits -  
Nonprofit Institution Transfer  
Receipts from Households +  
Nonprofit Institution Income*

## 4. Construct inequality statistics

- Gini, 90/10 ratio
- Deciles, Quintiles
- Top 1% Share, Top 5% Share

- All data sources are publicly-available: emphasis on *transparency* and *utility* for data users
- We adjust the “tail” (top incomes) using aggregated tax data from IRS (SOI) – matches Fixler, Gindelsky, and Johnson (2019) using Pareto adjustment on tax data
- We allocate PI, not GDP
  - 87% of GDI (the income counterpart of GDP)
  - Most appropriate national accounts concept for households
  - Distribute Table 2.9 to separate out NPISH
  - Adjust for household size (i.e., “equalize”): accounts for resource sharing in households

- Tables

- Deciles of PI for Table 2.9
- Decomposition of PI (AMI, Health, Finance, other Transfers)
- Inequality metrics

- Charts

- Real PI (\$2012) by quintile 2007-2016
- Annual growth in PI, contributions by income category

# Key Takeaways

---

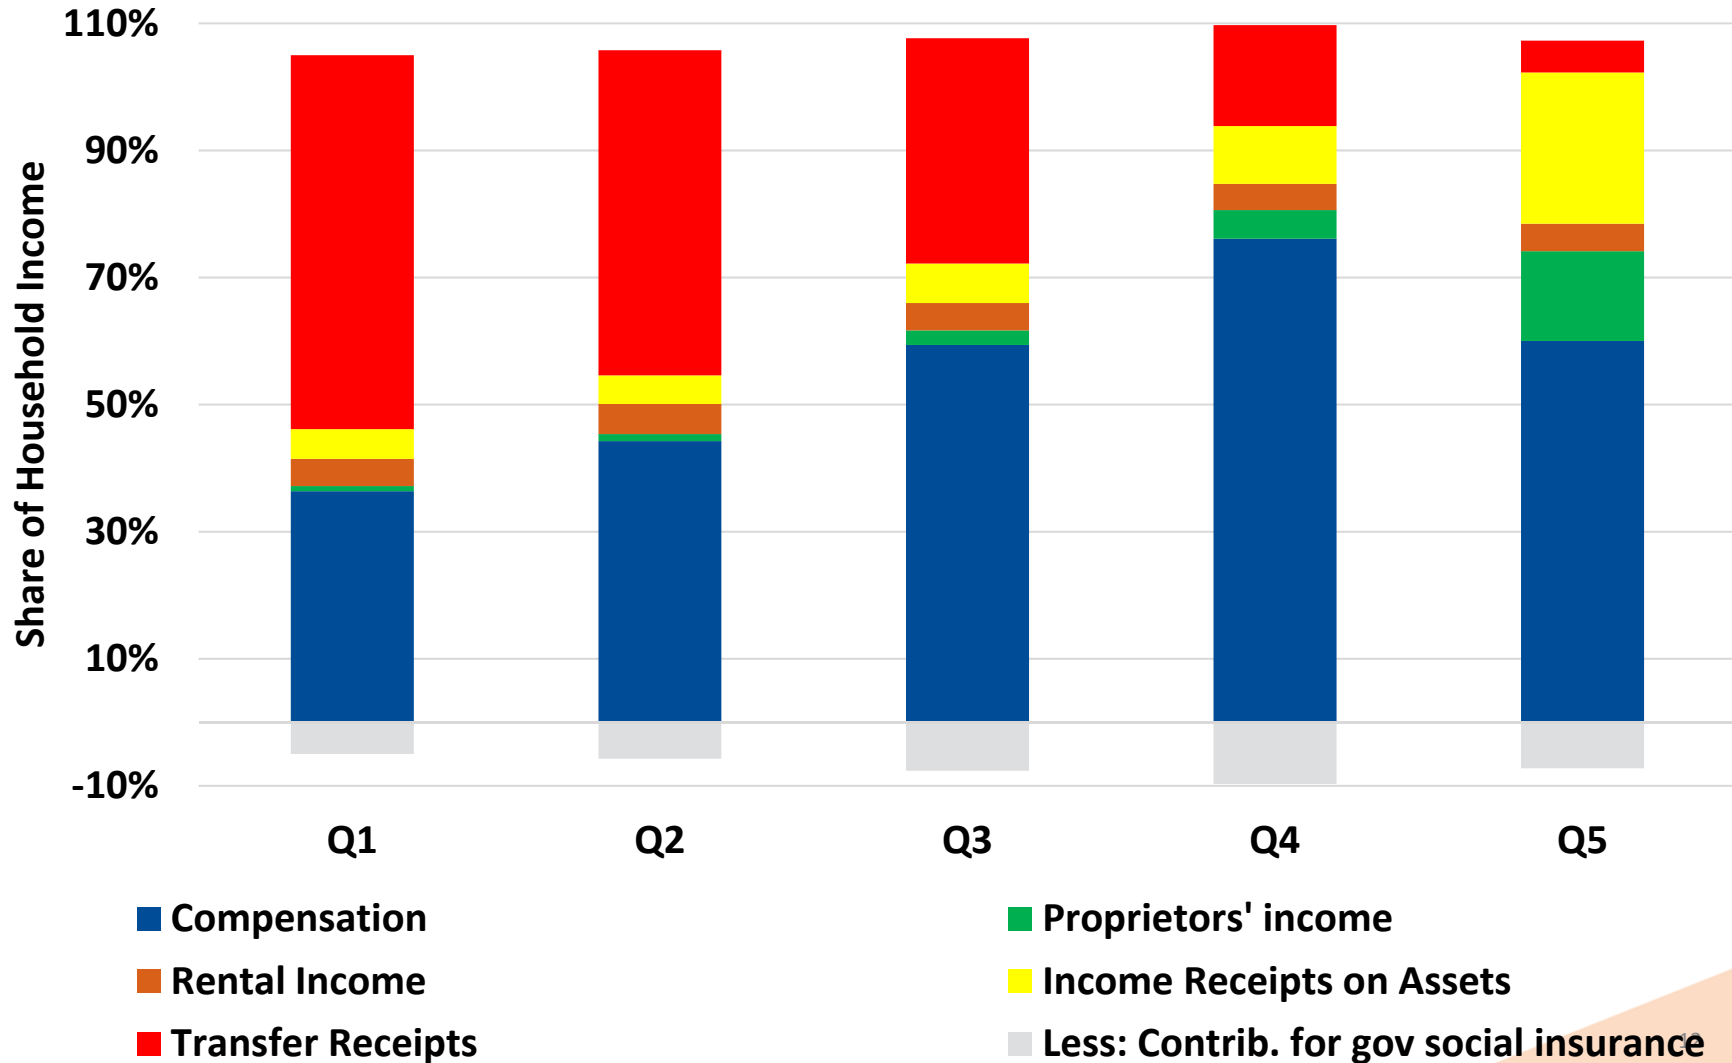

- Real Personal Income grew 17.9% overall from 2007-2016, and for every quintile.
- Most of the growth in Real PI (58%) went to the top quintile (particularly the 80-99%)
- Eq. Mean PI grew faster (9.2%) than Eq. Median PI (6.2%)
- Inequality increased very little over the period
- Share of compensation ↓ and transfers ↑ in income over time – very different across quintiles
- Transfers make up a significant share of Health and Adjusted Money Income

# Various Estimated Movements in Top 1% over Time

	2007	2008	2009	2010	2011	2012	2013	2014	2015
<b>BEA</b>	12.7%	12.9%	11.7%	11.9%	12.5%	13.4%	12.3%	12.6%	12.9%
<b>A&amp;S Before-tax, After-transfer</b>	12.9%	12.1%	11.3%	12.2%	11.9%	13.2%	12.1%	12.4%	12.2%
<b>PSZ (post tax and transfer)</b>	15.3%	15.2%	15.1%	16.3%	16.2%	17.0%	15.5%	15.8%	15.6%
<b>CBO (post tax and transfer)</b>	16.6%	13.9%	11.3%	12.6%	12.5%	14.9%	12.2%	13.3%	13.2%

# Share of Household Income for each Contributing Component by Eq. Quintile (2016)

# Change in Contributing Components by Quintile

## 2007-2016

	0-20%	20%-40%	40%-60%	60%-80%	80%-100%
Compensation of Employees	-7.7	-6.0	-8.2	-4.1	-2.0
Proprietors' income	-0.8	-0.9	-1.2	-0.9	1.8
Rental Income of Households	2.8	3.3	2.9	2.7	2.6
Income Receipts on Assets	-1.2	-1.7	-2.1	-1.5	-3.4
Household Current Transfer Receipts	6.0	4.6	7.6	3.5	1.0
Less: Contributions for government social insurance	0.9	0.7	0.9	0.3	0.1

# Conclusions

---

- The definition of income is very important in comparing results for growth and inequality
- BEA top shares are very close to those of Auten and Splinter in level and PSZ (post-transfer) in trend. They are reasonably close to CBO, holding income definition constant.
- Transfers make up approx. half of income for bottom quintiles throughout the period.
- Great recession had differential effect on income categories.

Table 1: Major Components of Personal Income by Decile, 2016

Line	Income component	Total (Billions of dollars)	0- 10% (percent)	10%- 20% (percent)	20%- 30% (percent)	30%- 40% (percent)	40%- 50% (percent)	50%- 60% (percent)	60%- 70% (percent)	70%- 80% (percent)	80%- 90% (percent)	90%- 100% (percent)
